Mr. Hemanth Goud Burra (Founder & CEO, Tech Roxx)

04 | BOOTCAMP CURRICULUM & TECHNICAL BREAKDOWN

- Day 1: Fundamentals & Setting Expectations
- Day 2: Foundational Frameworks & Architectures
- Day 3: Mid-way Acceleration & Integration
- Day 4: System Design & Engineering Layers
- Day 5: Real-World Application Paradigms
- Day 6: Pre-Deployment & Career Positioning
- Day 7: Practical Project Development & Deployment Strategies

05 | ANALYTICS, FEEDBACK & IMPACT ASSESSMENT

Participant Demographics, Satisfaction Metrics & Effectiveness Data

06 | ADMINISTRATIVE PROOFS & APPENDICES

Official Invitations, GitHub Submissions & Certificate Templates

07 | CONCLUSION & FUTURE OUTLOOK

01 | EXECUTIVE SUMMARY

The Ignite AI 2026 Bootcamp was a comprehensive 7-day intensive program designed to bridge the gap between theoretical artificial intelligence concepts and practical, career-ready engineering skills. **Organized by Student Developers Community (SDC SNIST)**, in strategic **collaboration with the Tech Roxx** an MSME-registered technology and education organization, the initiative focused entirely on building core technical competencies and hands-on application development.

Over the course of seven days, participants were guided through a rigorous, structured curriculum spanning from **foundational AI paradigms to advanced system design and Large Language Model (LLM) integrations**. The program culminated in a hands-on project phase where students actively developed, documented, and deployed custom AI-powered applications utilizing tools such as Google AI Studio, the Groq API, and NotebookLM.

This document serves as the official **Proof of Work (PoW)** and comprehensive post-event report. It details the daily technical progression, outlines the instructional architecture, and provides data-driven insights into participant satisfaction and skill acquisition. By moving beyond high-level theory into strict, practical execution, Ignite AI 2026 successfully empowered a new cohort of student developers to transform innovative ideas into robust, deployable technological solutions.

COMPANY PROFILE | TECH ROXX

Tech Roxx is a recognized, MSME-registered EdTech and technology services organization dedicated to closing the gap between traditional academic theory and modern industry demands. By focusing on emerging technologies and hands-on application, Tech Roxx provides enterprise-grade curriculums, practical bootcamps, and advanced technical services. The organization is built on the philosophy that true engineering competency comes from building, documenting, and deploying real-world solutions.

LEADERSHIP

The organization is spearheaded by **Hemanth Burra, Founder & Chief Executive Officer (CEO)**. Under his leadership, Tech Roxx focuses on building a highly scalable, global developer ecosystem driven by deep expertise in technology, community building, and operational management.

CORE TECHNICAL COMPETENCIES & OFFERINGS

Tech Roxx specializes in high-impact technological domains, ensuring students and clients are equipped with modern, deployable skills. Our primary areas of expertise include:

- **Artificial Intelligence & Machine Learning:** Specialized training and development in Generative AI, Large Language Models (LLMs), Agentic AI, and API integrations
- **Embedded Systems & IoT:** Practical development using microcontrollers (ESP32, Arduino), sensor integration, and advanced robotics frameworks like ROS 2.
- **Advanced Hardware Design:** Comprehensive training and services in Printed Circuit Board (PCB) design, multi-layer architecture, and manufacturing processes.
- **Intensive Tech Bootcamps:** Designing and executing immersive, multi-day training programs (such as Ignite AI) that take participants from core concepts to fully deployed projects.

Strategic Vision & Operations

As a rapidly growing technology hub, Tech Roxx is actively expanding its footprint. The organization focuses on scalable learning models, including upcoming global remote internship programs, designed to provide developers worldwide with hands-on experience in cutting-edge tech stacks.

COMMUNITY PROFILE | SDC SNIST

Fostering Innovation, Leadership, and Collaborative Engineering

Community Overview

The Student Developers Community (SDC) at SNIST is a dynamic, student-driven technical ecosystem dedicated to cultivating the next generation of software engineers, AI researchers, and tech innovators. Designed as a bridge between academic coursework and practical industry demands, SDC provides a vital platform for aspiring developers to explore modern tech stacks, engage in rigorous peer-to-peer learning, and build portfolio-worthy projects.

Core Mission & Objectives

SDC SNIST operates on the principle that the best way to learn technology is to build it. The community is focused on several key pillars:

- **Peer-to-Peer Learning:** Creating an environment where knowledge is shared freely, allowing junior developers to be mentored by senior peers and industry professionals.
- **Hands-on Workshops & Bootcamps:** Organizing immersive technical events that move beyond theory, forcing participants to write code, design architectures, and deploy real applications.
- **Project-Based Development:** Encouraging members to collaborate on open-source projects, hackathons, and community-driven tech solutions to build robust professional portfolios.
- **Industry Readiness:** Partnering with tech organizations and industry leaders to expose students to enterprise-grade tools, APIs, and modern development workflows.

03 | KEY SPEAKER PROFILE

Hemanth Goud Burra

FOUNDER & CEO
TECH ROXX

Mr. Hemanth Goud Burra is a highly accomplished technology leader, AI developer, and the visionary Founder of Tech Roxx. He holds a strong engineering foundation in Electronics and Communication, allowing him to seamlessly bridge the gap between high-level software development and complex hardware integration.

Core Technical Expertise

Mr. Burra specializes in the research and development of Generative AI, Large Language Models (LLMs), and Agentic AI architectures. His technical portfolio is defined by a deep proficiency in high-impact, practical deployments spanning both software and hardware engineering. This encompasses Advanced API integrations, Embedded Systems, the Internet of Things (IoT), Printed Circuit Board (PCB) design, Robotics.

Instructional Philosophy & Engineering Mentorship

With a proven track record of training over 1,000 students and aspiring engineers throughout his career, Mr. Burra brings extensive, hands-on experience in technical mentorship. His approach is built on the belief that true engineering competency is forged through practical application rather than passive theory.

As the lead instructor and principal architect of the Ignite AI Bootcamp, he utilizes a strictly deployment-focused teaching methodology that simulates real-world engineering environments. He expertly guides participants through hands-on logic implementation, complex system design. His ultimate objective is to empower the next generation of engineers with the confidence and capability to translate abstract technical concepts into highly functional, deployable real-world solutions.

DAY 1 | AI FUNDAMENTALS & PERSONAL BRANDING

1. Technical Curriculum & Core Focus

The opening day of the Ignite AI 2026 Bootcamp was designed to establish a strong technical baseline, transitioning students from casual AI users to intentional, structured prompt engineers.

- **Understanding the AI Landscape:** An in-depth breakdown of the evolution of Artificial Intelligence, distinguishing between Discriminative models (data analysis) and Generative models (content creation).
- **Anatomy of Large Language Models (LLMs):** High-level exploration of how LLMs process information, maintain context, and generate human-like text.
- **Advanced Prompt Engineering:** Moving beyond basic conversational queries, participants learned how to construct multi-variable prompts, set systemic rules, and generate highly specific, structured outputs using tools like ChatGPT, Gemini, and Claude.

2. Practical Application:

"BRAND ME 2026" To immediately apply the concepts of prompt engineering, students were tasked with their first major practical assignment: The Product Launch of YOU. The objective was to utilize AI not just as a search engine, but as a strategic branding partner.

- **The Challenge:** Participants were instructed to imagine themselves as a premium product being launched into the market. They had to think like startup founders, utilizing AI tools (including Canva AI and Copilot) to generate a unique personal brand identity.
- **AI-Generated Deliverables Required:**
 - A Unique Product Name (e.g., FutureX Pro 1.0, Data Titan Pro)
 - A Catchy Tagline & Product Category/Domain
 - Top 5 Unique Selling Propositions (USPs) & Core Features
 - A Personal Brand Story and Future Upgrades (Goals)
 - A professional, AI-generated product package mockup or visual poster.

3. Execution & Evaluation Matrix To validate the work and boost the students' professional visibility, the final assignment required public deployment.

- **Public Deployment:** Students were required to publish their AI-generated branding packages on LinkedIn, formally tagging the Student Developers Community (SDC) and Tech Roxx to initiate their professional networking journey.

Key Outcome: Day 1 successfully shattered the intimidation barrier of using AI for professional development, equipping students with a foundational understanding of LLMs and a highly optimized digital footprint.

FEEDBACK OF THE STUDENTS - DAY 1

Overall Experience - Day 1

Speaker Performance - Day 1

DAY 2 | AI-OPTIMIZED CAREER POSITIONING & RESUME ARCHITECTURE AND PROMPT ENGINEERING

1. Technical Curriculum & Core Focus

Day 2 shifted the focus from foundational AI models to immediate, high-impact career application. The session bridged the gap between prompt engineering and professional visibility, teaching students how to leverage AI to navigate the modern hiring ecosystem.

Algorithmic Filtering & ATS: A deep dive into Applicant Tracking Systems (ATS), explaining how automated HR algorithms parse, rank, and filter technical resumes based on keyword density, semantic matching, and layout structure.

Reverse-Engineering Job Descriptions: Teaching students how to utilize LLMs (ChatGPT, Gemini, etc.) to analyze target Job Descriptions (JDs) and extract the exact technical competencies and power verbs required by recruiters.

Design vs. Data: Understanding the balance between human readability and machine parsability. The curriculum covered how to deploy resumes using professional frameworks like Overleaf (LaTeX) for engineering roles, alongside MS Word and Canva for rapid design.

2. Practical Application: "AI-Optimized Career Positioning"

Following the technical instruction, students were assigned a high-stakes practical task aimed at drastically improving their hiring potential and digital footprint.

The Challenge: Participants were required to act as their own career agents, utilizing AI tools to construct a highly targeted, ATS-optimized resume based on real-world engineering Job Descriptions.

AI-Generated Deliverables Required:

- **The ATS Resume (Compulsory):** Drafted with AI-assisted copywriting and professionally formatted to ensure it passes algorithmic screening.
- **Personal Portfolio Website (Optional but Recommended):** A digital showcase of the student's skills, projects, certifications, and achievements to serve as an interactive extension of their resume.

3. Execution & Evaluation Matrix

To complete Day 2, participants had to publicly deploy their professional assets and submit them for grading, creating a massive wave of visibility for this cohort.

Public Deployment: Students were required to share their newly optimized professional profiles on LinkedIn, tagging the organizers and initiating their professional networking journey.

Submission Protocol: Submissions were tracked via a dedicated portal, requiring the Resume PDF link and the LinkedIn post link.

Core Philosophy: "Your resume is your first impression—make it count!"

Key Outcome: Day 2 successfully equipped students with the precise digital assets required to secure internships and technical placements, proving that AI is a powerful tool for career acceleration.

Feedback of Day 2

DAY 3 | ENTERPRISE AI FUNDAMENTALS & MULTIMODAL GENERATION

Core Learning Focus

Day 3 introduced participants to the technologies powering modern intelligent enterprises. Students explored Enterprise Generative AI (IBM Framework), understanding foundation models, responsible AI, and scalable business applications. They also gained hands-on exposure to Google Gemini and Imagen, learning how multimodal AI combines text, image generation, and advanced reasoning capabilities to solve real-world challenges.

Enterprise Technology Ecosystem

Participants were introduced to the modern enterprise stack that drives digital transformation:

- **Cloud Platforms:** AWS, Microsoft Azure, Google Cloud
- **ERP Systems:** SAP S/4HANA, SuccessFactors, SAP Build
- **CRM Platforms:** Salesforce Customer 360, Zoho One, Zoho CRM Plus
- **ITSM Solutions:** ServiceNow Incident & Asset Management
- **Business Intelligence:** Power BI, Tableau, SAP Analytics Cloud, AWS QuickSight
- **Automation Tools:** Microsoft PowerAutomate, Make (Integromat), RPA Workflows

The session highlighted how organizations leverage cloud infrastructure, automation, analytics, and AI to streamline operations, enhance customer experiences, and improve decision-making.

Agentic AI, RAG & Industry Certifications

Students explored the next evolution of AI through Agentic AI, understanding autonomous reasoning, planning, tool selection, action execution, and self-evaluation. The concept of Retrieval-Augmented Generation (RAG) was introduced to demonstrate how AI systems retrieve trusted information to reduce hallucinations and generate accurate responses.

To validate their learning, participants completed globally recognized certifications:

- IBM SkillsBuild – Generative AI Fundamentals
- Google Cloud Skills Boost – Build with Gemini & Imagen

Outcome: Participants gained practical knowledge of enterprise AI systems, multimodal content generation, automation frameworks, cloud technologies, Agentic AI architectures, and industry-standard certification credentials, preparing them for the future of intelligent digital enterprises.

3. Execution & Evaluation Matrix

Completing the modules was only the first half of the assignment; the second half focused on leveraging these achievements for professional networking.

- **Public Deployment:** Students were required to download their verified digital certificates and publish them to their professional LinkedIn feeds, formally tagging both SDC SNIST and Tech Roxx.
- **Submission Protocol:** Submissions were tracked via a centralized portal where students uploaded both their certificate files and their live LinkedIn post URLs.
- **Key Outcome:** Day 3 transformed the cohort's professional digital footprint. By acquiring and displaying credentials from IBM and Google, students successfully elevated their status from AI enthusiasts to verified, enterprise-trained developers.

Feedback of Day 3

Overall Experience - Day 3

Speaker Performance - Day 3

DAY 4 | MACHINE LEARNING FUNDAMENTALS TO MLOPS

Core Learning Focus

Day 4 introduced participants to the foundations of Artificial Intelligence, Machine Learning, Deep Learning, and MLOps, providing a complete understanding of how modern AI systems learn from data and are deployed in real-world applications. Students explored the differences between traditional programming and machine learning, learned why organizations rely on data-driven models, and gained exposure to the complete machine learning development lifecycle.

Machine Learning Concepts & Model Development

Participants explored the major learning paradigms used in modern AI systems:

- Supervised Learning – Prediction and classification using labeled data
- Unsupervised Learning – Pattern discovery and clustering using K-Means
- Semi-Supervised Learning – Combining labeled and unlabeled datasets
- Reinforcement Learning – Learning through rewards and penalties

The session further covered:

- Dataset fundamentals (Features, Labels, Observations)
- Training vs Testing Data (80:20 Rule)
- Data Collection & Data Cleaning
- Feature Engineering Techniques
- Model Training and Prediction Pipelines
- Performance Metrics: Accuracy, Precision, Recall & F1-Score
- Underfitting, Good Fit & Overfitting Analysis

Students worked through practical examples involving placement prediction systems, recommendation engines, spam detection, fraud detection, and healthcare analytics.

Deep Learning, Computer Vision & MLOps

Building upon ML fundamentals, participants were introduced to Deep Learning and Neural Networks, understanding how multi-layered architectures process complex patterns in images, text, and audio data.

Key applications discussed:

- Computer Vision & Face Recognition
- Autonomous Vehicle Perception Systems
- Satellite Image Analysis & Remote Sensing
- Real-Time Object Detection Systems

Outcome: Participants developed a strong foundation in Machine Learning concepts, model evaluation, Deep Learning fundamentals, Computer Vision applications, and the end-to-end MLOps workflow required to deploy scalable AI solutions in real-world environments.

3. Execution & Evaluation Matrix

The evaluation for Day 4 required students to synthesize their hands-on API coding with their continued enterprise-level credentialing to maintain professional visibility.

Public Deployment: Students were tasked with publishing their newly acquired IBM SkillsBuild certification alongside insights from their practical API assignment to their LinkedIn networks, ensuring they tagged SDC SNIST and Tech Roxx to maintain campaign momentum.

Submission Protocol: All deliverables were routed through a dedicated day-specific portal, requiring the upload of their completed assignment proof and the live LinkedIn URL for strict verification.

FEEDBACK - DAY 4

DAY 5 | AGENTIC AI, MULTI-AGENT SYSTEMS & INTELLIGENT AUTOMATION

Core Learning Focus

Day 5 focused on the next evolution of Artificial Intelligence—Agentic AI and Multi-Agent Systems (MAS). Participants explored how AI is evolving from rule-based systems and traditional chatbots into autonomous agents capable of reasoning, planning, memory management, tool usage, and end-to-end task execution. The session highlighted how modern AI agents can independently solve complex problems, interact with external systems, and collaborate with other agents to achieve organizational goals.

Agent Architectures & Multi-Agent Collaboration

Participants gained a deep understanding of enterprise-grade AI agent architectures, including:

- Components of an AI Agent: Perception, Reasoning, Planning, Memory & Action
- Agentic AI Enterprise Architecture and Cognitive Workflows
- Short-Term & Long-Term Memory using Vector Databases and RAG
- Tool Usage through APIs, Databases, Enterprise Applications & File Systems
- Single-Agent vs Multi-Agent Architectures
- Multi-Agent Collaborative Workflows and Role Specialization

The session demonstrated how specialized agents such as Research Agents, Analysis Agents, Writer Agents, and Reviewer Agents collaborate to solve complex business tasks with greater accuracy, scalability, and efficiency than traditional AI systems.

Intelligent Automation, RPA & Hyper automation

Building upon Agentic AI concepts, students explored modern automation ecosystems that integrate AI decision-making with workflow orchestration and Robotic Process Automation (RPA).

Key technologies covered:

- No-Code AI Platforms: Make (Integromat), n8n, Zapier & Opal
- Workflow Automation & Enterprise Orchestration
- Robotic Process Automation (RPA) Fundamentals
- Enterprise RPA Tools: UiPath, Power Automate etc.

Execution & Evaluation Matrix

As with previous days, evaluation relied on public deployment to ensure students continued to build their verifiable professional portfolios.

- **Public Deployment:** Students were required to publish their verified IBM Agentic AI certification to their LinkedIn networks, outlining their newly acquired understanding of autonomous workflows, and formally tagging SDC SNIST and Tech Roxx.
- **Submission Protocol:** Deliverables were submitted through the daily verification portal, requiring both the certificate file and the live professional networking post.
- **Key Outcome:** Day 5 successfully transitioned the cohort from basic application developers to advanced systems thinkers. By mastering Agentic AI, students proved they are capable of building the next generation of software that doesn't just talk, but acts.

Overall Experience - Day 5

Speaker Performance - Day 5

Speaker Performance - Day 5

DAY 6 & DAY 7 | AI APPLICATION DEVELOPMENT, FUTURE TECHNOLOGIES & CAPSTONE PROJECT IMPLEMENTATION

Core Learning Focus

The final two days of Ignite AI 2026 transformed participants from AI users into AI builders. Students explored the complete journey of developing intelligent AI applications using Python, modern AI frameworks, APIs, open-source models, and multi-agent systems. The sessions further expanded into India's rapidly growing AI ecosystem, future AI technologies, career opportunities, and practical project development methodologies required to build industry-ready AI solutions.

AI Development, Agents & Project Engineering

Participants learned the complete AI application development stack, including:

- Python for AI Development (NumPy, Pandas, Scikit-Learn, PyTorch)
- AI APIs & Model Integration (OpenAI, Gemini, Claude, DeepSeek)
- Google AI Studio & Hugging Face Ecosystem
- Open-Source Models and Foundation Models
- Chatbot Development & RAG Architectures
- AI Agents and Multi-Agent Systems using CrewAI, LangGraph & OpenAI SDK
- AI Product Design and Deployment Workflows

The sessions also introduced the Industry Project Development Lifecycle, enabling students to understand how real-world AI products are built:

1. Problem Identification & Requirement Analysis
2. Research & Solution Architecture Design
3. Data Collection & Processing
4. Model Selection & Development
5. Application Development & Integration
6. Testing, Validation & Optimization
7. Deployment & Monitoring
8. Documentation, Presentation & Product Scaling

Students explored practical AI project ideas such as Resume Analyzers, AI Tutors, Coding Assistants, Autonomous Agents, and Intelligent Automation Systems.

Future of AI, Careers & Industry Readiness

The concluding sessions focused on emerging technologies shaping the next decade of innovation:

- India's AI Mission and National AI Infrastructure
- GPU Compute Ecosystems & AI Hardware Acceleration
- Semiconductor Mission & Indigenous AI Hardware Development
- Indian AI Startups and Innovation Ecosystem
- Artificial General Intelligence (AGI) & Superintelligence Concepts
- Physical AI, Robotics & Embodied Intelligence
- Multimodal AI Systems & Edge AI Deployment
- Future AI Career Paths and Industry Opportunities

Students were guided on building professional portfolios, securing internships, contributing to open-source projects, developing technical profiles, and preparing for careers such as AI Engineer, Agent Architect, ML Systems Engineer, Robotics Engineer, MLOps Engineer, and AI Safety Specialist.

Outcome: Participants gained hands-on exposure to AI application development, agentic systems, project engineering methodologies, emerging AI technologies, India's AI ecosystem, and future career pathways. By the end of the program, students possessed both the technical foundation and practical roadmap required to design, develop, deploy, and scale real-world AI solutions.

FEEDBACK OF DAY 6 & 7

OVERALL FEEDBACK

Out of 179 total responses across all days:

- Rating 5 (Excellent): 31.8\% (57 votes)
- Rating 4 (Very Good): 58.1\% (104 votes)
- Rating 3 (Good): 8.9\% (16 votes)
- Rating 2 (Fair): 0.6\% (1 vote)
- Rating 1 (Poor): 0.6\% (1 vote)
